Research Participantis Needed!

FACTORS INFLUENCING MENTAL HEALTH CLINICIANS' REHABILITATION ORIENTATION WHEN TREATING JUVENILE PROBATION YOUTH

Purpose:

The purpose of this study is to understand how mental health clinicians' training, professional experience, and workplace support relate to their views about rehabilitation when working with justice-involved youth. This study aims to identify factors that may promote rehabilitation-oriented clinical practices and improve services for justice-involved youth.

This study is being performed for my dissertation at The Chicago School.

Participants will complete a one-time online survey (20-25 minutes) through Qualtrics. The survey includes questions about clinicians' professional training, experience working with youth, workplace support, and perspectives on rehabilitation for justice-involved youth.

You may participate if you meet the following:

- 18 years or older
- Lives in the United States
- Provides mental health services to probation-involved youth
- Employed in a behavioral health or juvenile justice setting
- **Must be a licensed mental health clinician**
