Research Participants Wanted

Exploring Culturally Responsive Assessment and Diagnostic Decision-Making Practices

with Black American Clients

My name is Tiffanay Perry, and I am conducting a research study to fulfill the requirements for a Psy.D in Applied Clinical Psychology at The Chicago School.

The purpose of this study is to explore how culturally sensitive assessment practices and the inclusion of cultural contextual factors influence clinicians' diagnostic decision-making practices when working with Black clients. The study aims to better understand how licensed mental health professionals describe their diagnostic reasoning, and how they interpret and incorporate cultural and contextual information when making diagnostic decisions.

You may participate in this study if you:

- Are 18 years or older
- Are an LMFT, LPCC, LCSW or Psychologist practicing in the United States
- Regularly conduct diagnostic assessments and assign diagnoses.
- Have a least one-year post-licensure clinical experience

What will you be asked to do?

During this study, you will be asked to complete a brief demographic questionnaire, read a randomly assigned clinical vignette, and respond to four open-ended survey questions designed to explore your diagnostic decision-making process. The survey will be administered through Qualtrics and may be completed from a private location of your choosing at any time the survey is available. The survey will take approximately 30 minutes to complete, and you may only complete it once.

Participation in this study is voluntary
